"Todoist user for 8 years and the new version just "feels" bad. Theres no feedback when you scroll down to refresh. You have to swipe further than necessary to do a quick action. The interface organization is a mess and isn't remotely similar to desktop. Very, very bad. Please work on this"

"I was trying to create a medium sized widget to have a simple task list and I can check them off once complete. The app didn't let me do that. The app made me move all the tasks to the inbox, but for some reason I can't see the inbox on the widget. Defeats the whole purpose for me."

"I'm disappointed with Todoist's notifications. Even for urgent tasks and reminders, the notification appears briefly and disappears like a regular notification, making it very easy to miss. I expected stronger, more persistent alerts—especially for important tasks. For a paid productivity app, the reminder system should be much more noticeable and reliable."

I have used Todoist since 2010 but will have to look for another app. I paid for pro for many of those years but \$60/year has become way too much.
